

Full Automatic ATF Machine

Description

With the Eurol transmission flushmachine, cleaning and changing the automatic transmission oil becomes simple and efficient. Due to the automatic detection of the oil flow, no extra steps are required, such as changing hoses by the technician. New and used oil are weighed automatically.

The variable oil pump adapts its speed to the flow of each specific transmission, ensuring there is enough oil present. Due to the user-friendly menu (available in nine languages), our machine is straightforward and easy to use. During the cleaning process, Eurol Transmission Flush additive is automatically mixed to the used oil.

This additive, which does not contain aggressive solvents, removes contamination from piping, cooler, torque converter and other transmission parts. By flushing with new oil, the old oil including contamination will be flushed out of the transmission. Resulting in a clean transmission that keeps perfect shifting gears that will stay in good condition.

SPECIFICATIONS:

- Suitable for all automatic transmissions, AT, CVT, DCT
- Display with user-friendly menu available in nine languages, English, Spanish, French, Italian, Romanian, Montenegrin, Finnish, Norwegian.
- Automatic detection of the oil flow with oil temperature sensor
- Variable flow pump, which automatically adjust the flow speed to any type of transmission
- High quality connectors for most car
